SKILLS

Languages

- Rust Go Python
- TypeScript Java Dart
- C/C++ SQL Bash

Backend

- Axum Tokio SQLx
- FastAPI NestJS GraphQL
- gRPC WebSockets

Data & streaming

- Kafka OpenSearch
- PostgreSQL Redis S3/MinIO
- NATS

Security

- SIEM/XDR Wazuh UEBA
- CTI · STIX MITRE ATT&CK
- Suricata Keycloak Vault
- mTLS · PKI Threat modelling

DevSecOps

- Kubernetes Docker Helm
- Argo CD GitLab CI
- GitHub Actions Trivy
- Prometheus

CGPA, BSc Cyber
Security

01 PROFILE

I lead SIEM development at Beta Tech Hub, building a **multi-tenant SIEM/XDR platform** for a managed security service provider. I take services from architecture and threat modelling to CI/CD and Kubernetes. I mainly use **Rust**, with **Go** for threat intelligence and **Python** for AI/ML. My SOC, GRC and network-security background is why I design for how systems fail.

02 EXPERIENCE

Secure Systems Developer & SIEM Development Team Leader

Feb 2026 – Now

Beta Tech Hub

Addis Ababa

- Lead the team building a **Kubernetes-native, multi-tenant SIEM/XDR platform**, from architecture to deployment.
- Built the **UEBA engine**: a Kafka-driven Rust pipeline with a scikit-learn worker that detects anomalies for each tenant.
- Built the **Case Management & Ticketing System** (Rust/Axum, PostgreSQL, Redis, S3, WebSockets) and the **Update Manager** for staged agent rollouts.
- Built an **agentic AI SOC assistant** (FastAPI) on Wazuh: four specialist agents with 69 tools and human approval gates.
- Built the **Go CTI service** (gRPC, STIX 2.1, OpenSearch, Redis) for threat-feed aggregation and IOC lookup.
- Own **DevSecOps**: Helm, Argo CD, Vault, Keycloak and mTLS, with GitLab CI gates on tests, cargo-audit and scanning.

Independent Software Engineer

Mar 2026 – Now

Open source

github.com/RustyHenok

- Fluxa**: a multi-tenant task platform with a Rust backend (Axum, SQLx, gRPC), RBAC, OAuth and signed webhooks, plus Next.js and Flutter clients.
- Rusty Chess**: multiplayer chess with a Rust engine, Glicko-2 ratings, a TLS-only server and a Tauri desktop app.

EDUCATION

BSc in Cyber Security

Bahir Dar University
May 2022 – Jun 2025

3.71 / 4.00 CGPA

Thesis: Real-Time Cyber Threat
Intelligence Platform

CERTIFICATIONS

(ISC)² CSSLP

Certified Secure Software Lifecycle
Professional

IN PREPARATION

TryHackMe

SOC Level 1 learning path

COMPLETED

02 EXPERIENCE continued

Information Security Analyst

Jul 2025 – Feb 2026

Amhara Media Corporation (AMECO)

Bahir Dar

- Monitored security events with **SIEM** and supported **incident response**.
- Ran **vulnerability assessments** and led **GRC** work: policies, standards and risk assessments.

Network Security Engineering Intern

Jul – Sep 2024

Information Network Security Administration (INSA)

Addis Ababa

- Worked on **data-centre** and enterprise **LAN/WAN** design: IPsec/MPLS VPNs, VRRP redundancy, load balancing and firewall policy.

03 PROJECTS

Real-Time Cyber Threat Intelligence Platform

2024 – 2025

BSc final-year project

github.com/HenokEshetu

- A STIX 2.1 threat-intelligence platform on **NestJS + GraphQL** (PostgreSQL, Redis, OpenSearch, Vault, RBAC), with real-time updates and a **React 19** analyst console.
- Enriches feeds from MITRE ATT&CK, VirusTotal, Shodan and AbusIPDB, and auto-generates **Suricata** IDS rules.

More on GitHub

- DeepNet** (Rust): SYN/connect/UDP scanner, packet crafter and sniffer.
- Syslog Analyzer** (Python, Go, NATS): real-time detection and attack correlation.
- Secure Notes + PKI** (Spring Boot, React): encrypted notes with its own certificate authority.
- Automation Tools** (Python, Go, Bash, PowerShell): cross-platform ops automation.

04 WHAT I BRING

Secure architecture

Tenant isolation, fail-closed
authorisation and threat-modelled
designs.

Detection engineering

SIEM, UEBA and CTI pipelines that
don't silently drop alerts.

DevSecOps delivery

GitOps on Kubernetes, with
security gates that block bad
releases.

AI for the SOC

LLM agents with tool calling,
human approval and audit trails.
