PROFILE

Secure Systems Developer and **SIEM Development Team Leader** building a multi-tenant **SIEM/XDR platform** for a managed security service provider (MSSP). I design, build and ship security services end to end — from architecture and threat modelling to CI/CD, Kubernetes and production operations — primarily in **Rust (Axum/Tokio)**, with **Go** for threat intelligence and **Python/FastAPI** for AI/ML. Hands-on with event streaming (**Kafka → OpenSearch**), UEBA and machine-learning anomaly detection, **LLM-based multi-agent SOC automation**, and DevSecOps supply-chain controls, grounded in SOC, GRC and network-security experience. BSc in Cyber Security (CGPA 3.71/4.00); preparing for the (ISC)² CSSLP.

EXPERIENCE

Secure Systems Developer & SIEM Development Team Leader

Feb 2026 – Present

Beta Tech Hub

Addis Ababa

- Lead the SIEM development team delivering a **Kubernetes-native, multi-tenant SIEM/XDR platform** (namespace-per-tenant isolation, tiered service catalogue) from architecture to deployment; set the team's standards for code review, testing and secure-by-default design.
- Designed and built the **UEBA engine**: a Kafka-driven Rust pipeline (ingest gateway → parser → feature → ML → OpenSearch indexer) with a Python **scikit-learn** ML worker (Isolation Forest, LOF, One-Class SVM, Random Forest) for tenant-scoped user and entity anomaly detection.
- Built the **Case Management & Ticketing System** in Rust/Axum (SQLx/PostgreSQL, Redis, S3-compatible evidence storage, Kafka, real-time WebSockets) and the **Update Manager** for staged agent rollouts, maintenance windows, rollback and fleet health, with SSE streaming and Keycloak RS256 JWT authorisation.
- Developed an **agentic AI SOC assistant** (Python/FastAPI) on Wazuh: a supervisor coordinating four specialist agents across 69 tools for investigation, hunting, MITRE ATT&CK triage and response. It is model-agnostic (OpenAI-compatible, vLLM, Gemini), with human approval gates, an audit trail, circuit breakers and input sanitisation.
- Built the **Go CTI service** (go-micro, gRPC/Protobuf), which aggregates threat feeds into **STIX 2.1** objects in OpenSearch with Redis caching and Bloom-filter IOC lookups, and supplies Kafka-stream alert enrichment (GeolIP).
- Own platform **DevSecOps**: Helm + Argo CD GitOps, HashiCorp Vault + External Secrets Operator, Keycloak OIDC (per-tenant realms), mTLS; GitLab CI with blocking gates (tests, clippy, cargo-audit, secret and container scanning, write-once image publication). Hardened the Wazuh alert path with bounded at-least-once delivery, enrichment quarantine and fail-closed tenant authorisation. Authored 400+ commits to the core platform.

STACK Rust (Axum, Tokio, SQLx, rdkafka, rustls) · Go · Python (FastAPI, Pydantic, scikit-learn) · TypeScript/React · Kafka · OpenSearch · PostgreSQL · Redis · S3/MinIO · Wazuh · Keycloak · Vault · Docker · Kubernetes · Helm · Argo CD · GitLab CI · Prometheus

Independent Software Engineer · Open Source

Mar 2026 – Present

Remote

- Fluxa** — a multi-tenant task and project management platform. Wrote the Rust 2024 backend (Axum, Tokio, SQLx/PostgreSQL, Redis, tonic gRPC) with JWT access/refresh rotation, Argon2, Google/GitHub OAuth, owner/admin/member RBAC, a tenant audit log, outbox workers, and HMAC-signed webhooks with retries and dead-lettering. OpenAPI-generated clients power a **Next.js 16** web app (BFF cookie auth) and a **Flutter**/Riverpod mobile app; Prometheus and OpenTelemetry tracing; CI with fmt, clippy, cargo-audit, OpenAPI diff and Trivy.
- Rusty Chess** — a multiplayer chess platform: a perft-verified Rust rules engine, Glicko-2 ratings and a lag-compensated server clock. The Axum server runs over TLS/WSS with Turso, Argon2id, hashed session tokens, rate limiting and certificate-fingerprint pinning; a **Tauri 2** desktop app and SolidJS UI are covered by Playwright and WebDriver E2E tests in GitHub Actions.

Information Security Analyst

Jul 2025 – Feb 2026

Amhara Media Corporation (AMECO)

Bahir Dar

- Monitored and triaged security events through **SIEM** and log analysis, escalating incidents and supporting **incident response** from detection through containment and recovery.
- Conducted **vulnerability assessments** of servers, network devices and web applications; prioritised findings by risk and tracked remediation with IT teams.
- Drove **governance, risk and compliance (GRC)**: drafted and maintained information-security policies, standards and procedures, and performed risk assessments to support compliance.

- Contributed to **data-centre design** and infrastructure planning, and to enterprise **LAN/WAN** design with VPNs (IPsec, MPLS) and load balancing.
- Implemented security protocols and **redundancy** (VRRP, firewall policy, SNMP monitoring), validated in Cisco Packet Tracer simulations.

■ **SELECTED PROJECTS**

Real-Time Cyber Threat Intelligence Platform

Nov 2024 – Jul 2025

BSc Final-Year Project

github.com/HenokEshetu/Real-time_Threat_Intelligence

- Built a **NestJS + Apollo GraphQL** backend (with real-time subscriptions) that manages **STIX 2.1** domain and cyber-observable objects, relationships and reports, using TypeORM/PostgreSQL, Redis pub/sub, Bull queues and HashiCorp Vault, with JWT/Passport/Google OAuth and RBAC.
- Automated feed ingestion and enrichment (MITRE ATT&CK, VirusTotal, Shodan, AbuseIPDB, ThreatFox, Hybrid Analysis), with OpenSearch-backed search. Wrote a **Python Suricata bridge** that turns STIX indicators into IDS rules and hot-reloads them, exposing Prometheus metrics.
- Delivered a **React 19 + TypeScript** analyst console with live GraphQL subscriptions, geo-maps, knowledge-graph and timeline views. Authored ~260 of the project's ~335 commits.

MORE ON GITHUB **DeepNet** (Rust/egui network toolkit: SYN/connect/UDP scanner, packet crafter, sniffer) · **Syslog Analyzer** (Python, Go, NATS, PostgreSQL: YAML detection rules and multi-step attack correlation) · **Secure Notes with PKI** (Spring Boot, React: encrypted notes with a dedicated certificate-authority microservice) · **System Engineering Automation Tools** (Python, Rust, Go, Bash, PowerShell: cross-platform account, backup, log and patch automation) · **Dengel Text Editor** (C++23, SDL)

■ **TECHNICAL SKILLS**

Languages	Rust, Go, Python, TypeScript/JavaScript, Java, Dart, C/C++, SQL, Bash, PowerShell, PHP
Backend & APIs	Axum, Tokio, SQLx, FastAPI, Pydantic, NestJS, GraphQL (Apollo), gRPC/Protobuf, go-micro, Spring Boot, REST, SSE, WebSockets
Data & Streaming	Apache Kafka, OpenSearch/Elasticsearch, PostgreSQL, Redis, S3/MinIO, NATS, Turso/SQLite
Security Engineering	SIEM/XDR, Wazuh, UEBA, EDR/IDS integration, Suricata, CTI (STIX 2.1, MITRE ATT&CK), Keycloak/OIDC/JWT, mTLS, PKI & applied cryptography, HashiCorp Vault, threat modelling, secure SDLC, multi-tenant isolation
AI / ML	LLM agents & multi-agent orchestration, tool calling, OpenAI-compatible APIs/vLLM, Google Gemini, AI-assisted development; scikit-learn anomaly detection
DevSecOps & Cloud	Docker, Kubernetes, Helm, Argo CD (GitOps), External Secrets Operator, GitLab CI/CD, GitHub Actions, SAST/SCA (clippy, cargo-audit), Trivy, secret & container scanning, Prometheus, OpenTelemetry
Testing	cargo test, pytest, Vitest, Playwright, WebDriver, Helm unittest, contract/OpenAPI diff checks
Frontend & Apps	React, Next.js, SolidJS, Vite, Tailwind CSS, Tauri 2 (desktop), Flutter/Dart (mobile)
Networking & Offense	LAN/WAN, MPLS, IPsec VPN, VRRP, firewalls, load balancing, data-centre design · web & network penetration testing

■ **EDUCATION**

BSc in Cyber Security

Bahir Dar University · Bahir Dar, Ethiopia
May 2022 – Jun 2025 · CGPA 3.71 / 4.00
Thesis: Real-Time Cyber Threat Intelligence Platform

■ **CERTIFICATIONS & TRAINING**

- > **(ISC)² CSSLP** — Certified Secure Software Lifecycle Professional (*in preparation*)
- > **TryHackMe** — SOC Level 1 (SOC Analyst) learning path
- > **Hack The Box** — offensive-security labs (web & network exploitation)

■ **LANGUAGES**

Amharic (native) · English (professional working proficiency)
